

MGTS Downing Active Defined Return Assets Fund

Monthly commentary

During the month, we continued to deploy client monies across a range of Gilt backed, Equity Autocallable Swaps, adding five new positions with an average annual coupon of 8.96%. These positions were selected to continue to diversify our portfolio across equity indices/regions as assets build towards our target diversification of indices/ barriers/maturities. The Fund was fully invested for most of the month however we ended the month with 4% in cash, ready to be deployed in early April.

The Fund is 100% fully collateralised with UK Gilts, with an average maturity of just over 6 years, upon which we have secured funding rates in excess of 36bps over SONIA.

The volatility experienced across global equity markets during February further accelerated during March as they tried to digest the implications of the announcement of further tariffs by US President Trump. The US bore the initial brunt of market weakness, with the technology sector particularly hard hit. Consequently, the US large cap market was down -5.75%, with the UK and EU large cap equity markets returning -2.6% and -3.9% respectively. Against this backdrop, the Fund returned -1.42%.

We continue to see the increased volatility associated with President Trump's intervention as an opportunity for the strategy to deploy fund inflows at lower index levels and attractive coupons, as interest rates also remain relatively high. However, in the short term the impact of this increased volatility is likely to have a negative impact on the value of the current portfolio.

Opinions expressed in the Fund Manager's commentary represent their views at the time of publication, are subject to change, and should not be interpreted as investment advice. Not all portfolios contain the holdings mentioned.

Key facts

As at 31 March 2025

Managers:

Huw Price (lead), Tony Stenning

IA sector: Specialist

Fund overview

The Fund aims to deliver consistent returns across the economic cycle and combines systematic strategies with active management. We focus on maximising the probability of securing the returns that occur most frequently within equity markets.

The Fund holds a high-quality portfolio of assets as secure collateral (typically UK Government bonds), and exposure is diversified across large, liquid equity indices such as the FTSE 100 or S&P 500. Our experienced team actively manage the investments to optimise risk and reward.

Forward looking scenario analysis and intrinsic value

These scenarios are an estimate of future performance based on current equity and derivative market conditions and changes in the portfolio composition and are subject to change. Actual performance depends on factors such as: how long you are invested and prevailing market conditions. The Fund aims to deliver long term consistent and predictable returns over a holding period of 5-6 years.

Market Move	-30%	-20%	-10%	0%	10%	20%	30%
3 months	-27.05%	-14.50%	-5.59%	0.48%	4.43%	6.89%	8.29%

Risk Considerations

The following risk factors are relevant to the overall risk profile of the Sub-fund. A full description of risk warnings is provided in the prospectus, which is available on our website, or by requesting a copy. Risks associated with the use of derivatives (FDI) for investment purposes are different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. The use of FDI requires an understanding of both the underlying reference instrument and the FDI itself. There is no assurance that any derivative strategy used by a Fund will succeed and derivatives can lead to significant losses. Defined Return Strategies (DRS) can be complicated and not readily available. There may be times and market conditions where opportunities to invest in DRS are not present at a fair price. In addition, the value of DRS is more complicated than other FDIs and therefore there can be a higher level of price uncertainty or available liquidity. DRS are usually designed to provide some protection against falls in the underlying reference asset. This means that the price of the DRS will typically fall by less than the underlying asset in most circumstances. However, there may be times when barriers that provide protection are at a higher risk of being breached. When this occurs then there is a risk that DRS may fall faster, causing greater losses, than the underlying reference asset.
